"Proud of the past…committed to the future"
is a slogan which accurately reflects Pioneer's heritage and its future.

Pioneer was founded in 1946 by the late Herman A. Shields, who owned a successful automotive parts manufacturer's representative firm in his hometown of Meridian, Mississippi. He formed the company to service the needs of his clutch remanufacturer customers. His goal was simple: Supply the needed, hard-to-find parts for these businesses.

Little did he know that the company he founded would become a leading supplier of high quality components to the automotive parts aftermarket. For over 30 years under the guidance of the Shields family, Pioneer growth was based upon the twin cornerstones of customer service and reputation of the "Source for hard-to-find parts."

In 1979, Pioneer was purchased by The Barnes Group (Bristol, Connecticut) and the company became known as Pioneer/Barnes. During the Barnes Group's ownership, Pioneer purchased a 10-acre parcel in the G.V. (Sonny) Montgomery Industrial Park and built an 86,000 sq. ft. corporate head-quarters and distribution center on the site.

The product line expanded dramatically during the Barnes years, adding operating cables, flywheels, ring gears, shop supplies and performance parts to the company's mix, while further expanding the clutch, engine parts and water pump lines. Additionally, Pioneer added regional warehouses in Mt. Laurel, New Jersey and Cerritos, California to provide improved delivery service to its East and West Coast customers.

Additionally, Pioneer has made major commitments to its total quality assurance programs. These quality performance processes have been adapted to order taking and filling, distribution and inventory controls, further improving fill rates and on-time delivery.

The distribution facilities have also undergone modernization. In 1995, the Meridian facility's distribution center was expanded, bringing the warehousing space to over 200,000 sq. ft.

In May, 2000, Pioneer bought the new clutch business of L&S and through this acquisition have added New Clutch Kits to form a "5 Star" line-up which includes Powertrain, Transmission Parts, Engine and Transmission Mounts, and Harmonic Balancers…giving Pioneer a strong and competitive package of Driveline related products.

In August of 2010, Pioneer was acquired by the LODI Group with a continued focus on product line expansion and making major investments in product tooling.

For over 60 years, the Pioneer story has been unique. Pioneer's growth has been based upon the philosophy of Herman Shields that success must be based upon customer service and satisfaction. Pioneer's Mission Statement reflects that philosophy:

"We are committed to the success of our customers. Our mission will be to provide customers with quality product and superior service. We believe the dedication of our employees and business partners is our most valued resource."

While the philosophy may seem passé in today's business environment, it has served Pioneer well through over six decades.

GUARANTEE

All parts are guaranteed against defects in material and workmanship for a period of one year from the date of the original consumer purchase.

"Our obligation under this guarantee is limited to replacement of the defective part or, at our option, repayment of the purchase price, conditioned in either case upon the return of the part to us with an explanation of the circumstances and conditions under which failure occurred. We neither assume nor authorize any other person to assume for us any other liability. IN NO EVENT WILL PIONEER BE LIABLE FOR ANY CONSEQUENTIAL OR INCIDENTAL DAMAGES, including claims for labor charges, transportation, or loss of revenue."

The information listed herein is correct to the best of our knowledge and belief, having been compiled from reliable and official sources of information. However, WE CANNOT ASSUME ANY RESPONSIBILITY FOR POSSIBLE ERROR.

CABLE INFORMATION

ACCELERATOR CABLE

The Accelerator Cable is the connecting factor between the floorboard foot pedal and carburetor, thus, serving to control the speed of the vehicle.

CLUTCH CABLE

The Clutch Cable carries the movement of the clutch pedal when depressed to the release bearing.

BRAKE CABLE

The Brake Cable is required to set the parking brakes on a vehicle. Each vehicle has 4 cables.

CONTROL CABLES

The Control Cables include choke, hood, power take-off and throttle control which are operated manually.

DETENT (Passing Gear) CABLE

The Detent or Kickdown Cable serves as the passing gear cable. When the driver needs to use the passing gear, he presses the accelerator pedal to move the Detent Cable, in an upward motion. This activates a valve in the Automatic Transmission and causes the transmission to go from its highest gear to the next lower gear, commonly known as the Passing Gear.

GROUND STRAP

The Ground Strap is adaptable to any Foreign or Domestic car. This strap grounds the engine to the chassis, which helps prevent electrical problems and premature internal transmission bushing wear.

MANUAL TRANSMISSION SHIFT CABLE

The Manual Shift Cables require two types of cables. The first activates the first through fourth or fifth gears. This cable is referred to as the selector cable. The second cable operates reverse. Chrysler and Ford refer to this cable as a crossover cable; Chevrolet as a shift lever cable.

SPEEDOMETER CABLE

The Speedometer Cable transfers the revolutions the transmission is turning to the speedometer. This enables the driver to read miles per hour and determine accurate travel speed.

TAILGATE SUPPORT CABLE

The Tailgate Support Cable works to support the tailgate in the open position. Two cables are required. One on each side.

TRANSHIFT CABLE

The Transhift Cable controls the reverse, park, neutral and drive positions on column shift and center console cars. It also activates the backup lights when placed in the reverse position.

TRANSMISSION ID CHART

ENGINE CODE FROM VIN

Sometimes, just the engine size is not enough. Knowing the engine code will help in getting the right part.

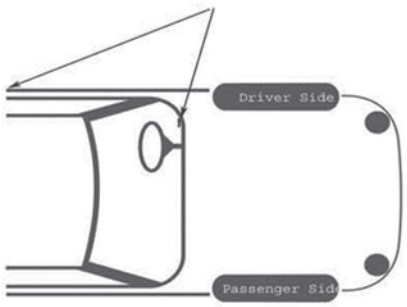

VIN codes are a mixture of numbers, letters, or symbols usually from 13 to 17 characters long.

This chart will help in determining the Engine Code of the vehicle.

PIONEER CABLE LUBE — CA-5000

Specially formulated, calcium based grease packaged in a convenient to use, single dose tube. Safe for use on all cables, in all temperatures – will not freeze in cold or run in hot temperatures. Eliminates vibration and noise, helps prevent corrosion and rust. Ideal for speedometer use.

(1 Tube – 5 grams by weight)

GROUND STRAP CABLE

— WARNING —

The Engine Ground Strap Cable must be connected and in good working condition to prevent the cable from welding together within the conduit and voiding the warranty.

WARRANTY IS VOIDED IF TRANSHIFT CABLE IS WELDED.

The Ground Strap is adaptable to any Foreign or Domestic car. This strap grounds the engine to the chassis, which helps prevent electrical problems and premature internal transmission bushing wear.

PIONEER NUMBER **CA-756**

SPEEDOMETER CABLES

Pioneer Speedometer Cables have been designed to consolidate the numerous SKU's required to cover today's applications. Therefore, some cables may be longer than those being replaced by design. Be sure to route new cables as not to interfere with hot exhaust or moving parts, while avoiding sharp bends, which may kink the inner cable. Pioneer's consolidated Speedometer Cable program insures maximum application coverage with minimum SKU's.

SPEEDOMETER CABLE CORE KITS

CA-4000	83"	Each core kit includes the appropriate length of replacement core cable, universal metal tip with square drive, two spacer washers and staking tool.
CA-4001	120"	

INSTRUCTIONS FOR REPLACING YOUR SPEEDOMETER CORE CABLE:

1) Remove old core cable and measure length. Determine which Pioneer core kit to use.
2) Cut new core cable to correct length on round end. (Note: DO NOT cut core cable on square end).
3) Attach drive tip to round end of core cable then, with staking tool, secure tip by striking firmly with a hammer. Remove tool with a flat end screw driver.
4) Lubricate new core cable and insert into your speedometer cable casing with factory square end going to transmission.

CABLE REPAIR KIT

CA-4005

Includes universal metal tip with square drive, two spacer washers, and staking tool for installation on your standard .130" diameter speedometer cable.

(Skin-packed – 1 Kit/card)

CABLE LUBRICANT

CA-5000

Pioneer cable lube is a specially formulated, calcium based grease in a convenient, single dose tube. Safe for use in all temperatures, helps prevent rust and corrosion.

(1 Tube – 5 grams by weight)
